Architecture 101
Part 1: From Nothingness To Place

Week 4: Observing the weather
Tuesday: #MySunMachine

Doubt thou the stars are fire,
Doubt that the sun doth move,
Doubt truth to be a liar,
But never doubt I love.

William Shakespeare

What will I do today?

Today, you will render the the sun.

Find something that looks like the sun (something that looks like the sun in outer space).

Now, render it.

Today, we give you 2 options.

You can either render the Sun using an application like pintograph, thicket or doodle dandy for iOS and spiroman or magic doodle for Android.

Or, you can use a similar app to the one you used yesterday.

One that lets you take a picture and render it using a special filter.

Today, the important thing is that you render the Sun in outer space.

:-)

Once you have your sun, post it to Instagram using the hashtags:

#MySunMachine
#Architecture1o1

What will I learn?

To render the sun.
To choose some parameters of selection.

Which part or element of the sun will you
focus on?

There are various apps you can use to
complete this task.

Which one works better for you?

Eventually, also to learn the difference
between its light.

The morning sun, the mid-day sun, the
afternoon sun, the sunset…

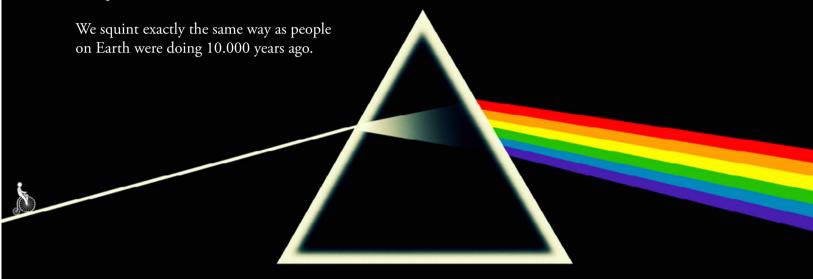

:-)

Why do we do this?

Because, the sun is new each day.
(Heraclitus)

Because when we look at the Sun,
we squint.

We squint exactly the same way as people
on Earth were doing 10.000 years ago.

When we think about it, it is impressive.

We don't do many things the same way
people did in those days.

Further inspiration

One song by Pink Floyd:

Set the Controls for the Heart of the Sun,
the only Pink Floyd song that features all
five band members.

Four works by Olafur Eliasson:

The Weather Project
Your Sun Machine
Double Sunset
Your exhibition guide for iOS and Android
